Features

- 3 ϕ 3-wire / Δ 196~305VAC or 3 ϕ 4-wire / Y 340~530VAC
- High efficiency up to 95%
- Water / forced air cooling selectable
- Output voltage and constant current level programmable
- Wide voltage adjustment range 1~120%
- Active current sharing up to 4 units(28.5KW)
- Built-in remote ON-OFF control / Alarm signal
- Protections: Short circuit / Overload / Over voltage / Over temperature / Fan fail
- 5 years warranty

Applications

- Energy & power system
- U.V or laser diode application
- Electrolysis system
- Factory control or automation apparatus
- Burn-in facility
- RF application
- EV charging station

Description

RST-7K5-HV is a 7.5KW 3 ϕ input enclosed type AC/DC power supply. This series operates for the wide range three phase AC input and offers the models with the high voltage DC output(115V/230V/380V) that mostly demanded from the industry. Two types of cooling methods, forced air and water cooling, that can be working at ambient temperature up to 70°C . Moreover, RST-7K5-HV provides vast design flexibility by equipping various built-in functions such as the output programming, active current sharing, remote ON-OFF control, alarm signals.....etc.

NOTE	1. All parameters NOT specially mentioned are measured at Δ 230VAC(Y 400VAC) input, rated load and 25 $^{\circ}$ C of ambient temperature. 2. Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf & 47uf parallel capacitor. 3. Tolerance :includes set up tolerance, line regulation and load regulation. 4. During withstand voltage and isolation resistance testing, the screw "A" x 3 shall be temporarily removed, and shall be installed back after the testing. 5. Derating may be needed under low input voltages. Please check the derating curve for more details. 6. If use PV signal to adjust Vo, under creatin operation conditions, ripple noise of Vo might go over rating defined in this specification. 7. Need additional EMI filter to meet regulations of EMC conducted and radiated emission. Characteristics of EMI filter please refer to the table, Minimum Insertion Loss. 8. The efficiency is measured at Δ : 230VAC/Y: 400VAC input. The efficiency level is measured at output voltage 115V(115V model)/230V(230V model)/380V(380V model). 9. The power supply is considered a component which will be installed into a final equipment. All the EMC tests are been executed by mounting the unit on a 600mm*900mm metal plate with 1mm of thickness. The final equipment must be re-confirmed that it still meets EMC directives. For guidance on how to perform these EMC tests, please refer to "EMI testing of component power supplies." (as available on http://www.meanwell.com) 10. The ambient temperature derating of 3.5 $^{\circ}$ C/1000m with fanless models and of 5 $^{\circ}$ C/1000m with fan models for operating altitude higher than 2000m(6500ft). 11. An unstable O/P voltage is expected in the first 300ms after power on. A minimum load of 5% is suggested if fast load change is required at power on phase. ※ Product Liability Disclaimer : For detailed information, please refer to https://www.meanwell.com/serviceDisclaimer.aspx

Note : RST-7K5 can also be operated by 1 ϕ 2-wire 196~305VAC input. Please refer to the connection diagram below.

Operating with 1 ϕ 2-wire may lead to certain characteristics different from the specification, such as the larger Ripple and Noise. Should there be any issues, please contact MEAN WELL.

Function Manual

1. Output Voltage Programming (or, PV / remote voltage programming / remote adjust / margin programming / dynamic voltage trim)

(1) Default by potentiometer (SVR)

(a) Have the DIP switch position-3 set as 

(b) Output voltage can be trimmed by SVR.

(2) By Output Voltage Programming

(a) Have the DIP switch position-3 set as 

(b) The output voltage can be trimmed to 1~120% by applying EXTERNAL VOLTAGE between PV+ and PV- on CN86 or CN87.

Fig 1.1

- ⊙ The 100% output voltage is 115/216/334V.
- ⊙ When PV signal to adjust voltage under $V_o < 11.5V$ (115V model) / 21.6V (230V model) / 33.4V (380V model) with dynamic load condition, the V_o overshoot & undershoot might go over rating.

- ⊙ The rated current should change with the Output Voltage Programming accordingly.
- ⊙ Maximum output current is Based on rated power wattage.

Fig 1.2

2.Constant Current Programming (or, PC / remote current programming / dynamic current trim)

(1)Default Overload Protection(OLP) 100~107% of rated current

(a)Have the DIP switch position-2 set as  ON

(b)Output current is set default value.

(2)By Constant Current Level Programming  OFF

(a)Have the DIP switch position-2 set as

(b)The constant current level can be trimmed to 20~100% of the rated current by applying EXTERNAL VOLTAGE between PC+ and PC- on CN86 or CN87.

Fig 2.1

Fig 2.2

- ⊙ Output will shut down after O/P voltage is below < 80% of Vset for 6 sec, re-power on to recover.
- ⊙ The 100% output current is Maximum current.

3.Select Overload Protection (OLP) Mode

(1)Default Continuous Constant Current mode  OFF

Have the DIPswitch position-1 set as OFF, and RST-7K5 will work in continuous constant current mode when the output is overloaded and the output voltage is greater than 50% of the rated output voltage.

(2)Delay Shutdown mode  ON

Have the DIPswitch position-1 set as ON, and RST-7K5 will shut down after 5 seconds of constant current operation, when the output is overloaded or short-circuited.

4.Remote ON-OFF Control

※ The power supply can be turned ON-OFF by using the "Remote ON-OFF" function.

Between Remote ON-OFF(CN96 pin5,7) and 12V-AUX(CN96 pin1,3)	Output Status
Switch close (Short)	power supply ON
Switch open (Open)	power supply OFF

Fig 4.1

5.Alarm Signal Output

※ There are 4 alarm signals on CN99, and each signal can select two types of output circuit.

- (1)Relay contact output {OTP1, OTP1-GND}; (DC-OK1, DC-OK1-GND); (AC-FAIL1-GND, AC-FAIL1); (FAN-FAIL1-GND, FAN-FAIL1)}
Normally open contact. "Short" when the alarm arises. Relay contact rating(maximum) is 30V/1A resistive.

Fig 5.1

- (2)Open collector output {DC-OK2-GND, DC-OK2}; (AC-FAIL2-GND, AC-FAIL2); (OTP2, OTP2-GND); (FAN-FAIL2, FAN-FAIL2-GND)}

An external voltage source is required for this function that is shown in Fig 5.2. These signals are isolated from output. The maximum sink current is 10mA and the maximum external voltage is 20V (there is a built-in 24V zener diode in inner circuitry).

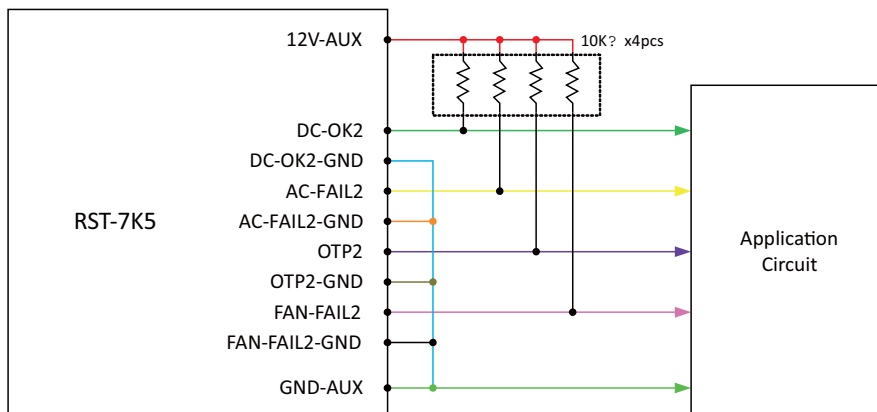

Fig 5.2

6.Current Sharing

RST-7K5 has the built-in active current sharing function and can be connected in parallel, up to 4 units, to provide higher output power as exhibited below :

- ※ The power supplies should be paralleled using short and large diameter wiring and then connected to the load.
- ※ In parallel connection, power supply with the highest output Voltage will be the master unit and its Vout will be the DC bus voltage.
- ※ The total output current must not exceed the value determined by the following equation:

$$\text{Maximum output current at parallel operation} = (\text{Rated current per unit}) \times (\text{Number of unit}) \times 0.95$$
- ※ When the total output current is less than 5% of the total rated current, or say $(5\% \text{ of Rated current per unit}) \times (\text{Number of unit})$ the current shared among units may not be balanced.
- ※ Under parallel operation ripple of the output voltage may be higher than the SPEC at light load condition. It will go back to normal ripple level once the output load is more than 5%.

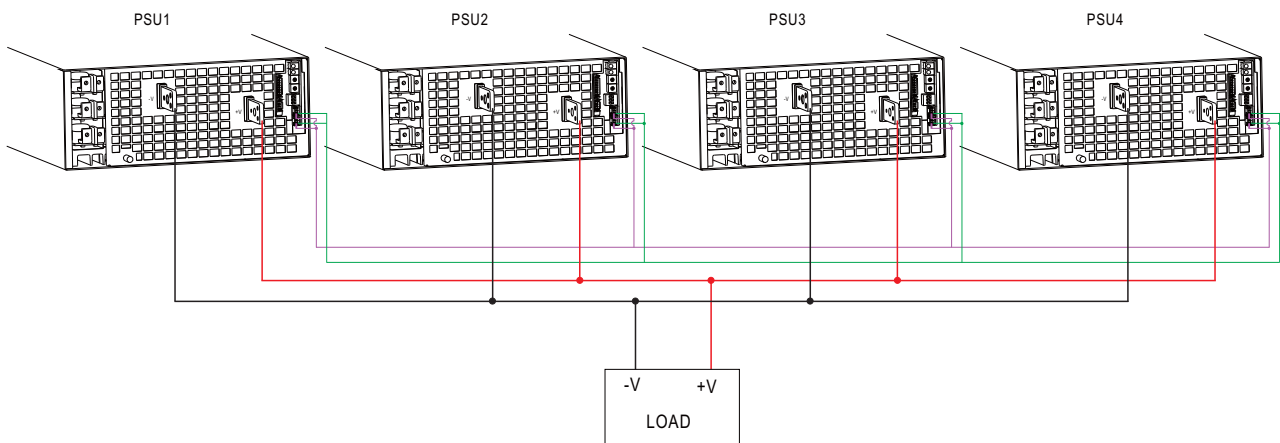

Fig 6.1

If the lines of CN86 or CN87 are too long, they should be twisted in pairs to avoid the noise.

© CS+,CS- are connected mutually in parallel.
